

The six weeks

Three weeks to close content, then practice tests until test day. And one decision, made this week, that matters more than any of it.

THE DECISION THAT CHANGES EVERYTHING
SUBMIT YOUR APPLICATION THIS MONTH. DO NOT WAIT FOR THE SCORE.

AADSAS lets you submit before your DAT score exists. Your application goes through verification on its own track, and the score attaches when it arrives. Admissions is rolling, so the date your file lands is the date you get in line.

Last cycle your application went in between November and January. If it goes in this month and the score follows in late October, you are roughly two months earlier than you have ever been, on the one axis that actually compounds.

What the six weeks look like

WEEK	DATES	STUDY	APPLICATION
One	Sep 14 to 20	Content. 7 banks	AADSAS submitted
Two	Sep 21 to 27	Content. 7 banks	Verification, letters confirmed
Three	Sep 28 to Oct 4	Content closes. 6 banks, then full length one	School list locked
Four	Oct 5 to 11	Two full lengths	Supplementals written
Five	Oct 12 to 18	Two full lengths, then test day	Quiet week
Six	Oct 19 to 25	Score arrives and goes out	Interview prep begins

Where you actually are, today

Organic is four banks in of thirteen. Gen chem is two of thirteen. That leaves **twenty banks** to close in three weeks, which is about seven a week, which is four bank days a week at roughly two banks a day.

THE HONEST ARITHMETIC

This is a real load and it is achievable, because the banks left are not evenly hard. Nomenclature and stereochemistry were the slow ones and they are done. Atomic structure, periodic properties and nuclear are fast. Gases, thermodynamics and electrochemistry are the three you named as weak, and they get their own days rather than being squeezed.

If a week slips, the thing that gets cut is biology volume. Never organic.

The rule for a bank

- Eighty percent is finished. Not one hundred. Get it to eighty and move.
- Every miss goes in the Ace Log with what actually went wrong, not just the right answer.
- Check the bank off in the portal when it hits eighty. Your schedule moves itself forward when you do.

The shape of a week

Mornings, which is when you work best. Biology and perceptual ability every single day, short, those are the floor. Gen chem Monday and Friday. Organic Tuesday and Thursday. Wednesday is quantitative reasoning and reading. Saturday is rest and it stays rest through all six weeks. Sunday we meet and build the next week off what you actually missed.

Closing content

Twenty banks, named and dated. This is the whole list, so there is never a morning where the question is what to work on.

Week one, September 14 to 20

DAY	THE BANK	ALONGSIDE
Mon	Gen chem 3 Atomic & Molecular Structure Gen chem 4 Periodic Properties	Bio: cell and molecular. PAT: pattern folding
Tue	Organic 5 Alkene Addition Reactions	Bio. PAT: keyholes
Wed	Quantitative reasoning: probability Reading: one passage at 13 minutes	Bio. PAT: top front end
Thu	Organic 6 Alkyne Reactions	Bio. PAT: pattern folding
Fri	Gen chem 5 Solutions	Bio. PAT: angle ranking
Sat	Rest.	
Sun	Session, and the week gets built from what you missed.	

Milestone: alkene and alkyne addition are the gateway to every reaction that follows. If Markovnikov and anti-Markovnikov are automatic by Sunday, week two is much easier than it looks.

Week two, September 21 to 27

DAY	THE BANK	ALONGSIDE
Mon	Gen chem 6 Gases Gen chem 7 Liquids & Solids	Bio: genetics. PAT: pattern folding
Tue	Organic 7 Ketones & Aldehydes	Bio. PAT: keyholes
Wed	Quantitative reasoning: statement and logic questions Reading: two passages to time	Bio. PAT: cube counting
Thu	Organic 8 Carboxylic Acid Derivatives	Bio. PAT: top front end
Fri	Gen chem 8 Thermochemistry & Thermodynamics	Bio. PAT: angle ranking
Sat	Rest.	
Sun	Session.	

Milestone: gases and thermodynamics were two of your three named gen chem weaknesses. By Sunday they should not be on that list any more. Carbonyl chemistry starts here and it carries the back half of the organic exam.

Week three, September 28 to October 4

DAY	THE BANK	ALONGSIDE
Mon	Gen chem 9 Chemical Kinetics Gen chem 10 Acids & Bases	Bio: endocrine. PAT
Tue	Organic 9 Alcohols, Ethers & Epoxides Organic 10 Enolate Reactions	Bio. PAT
Wed	Gen chem 11 Chemical Equilibrium Gen chem 12 Electrochemistry	Bio. PAT

Thu	Organic 11 Aromaticity & Benzene Organic 12 Free Radical & Diels Alder	Bio. PAT
Fri	Organic 13 Spectroscopy & Lab Techniques Gen chem 13 Nuclear Reactions	Light day. These two are the fastest banks left
Sat	Full length one. The rest day moves this week only.	
Sun	Session, spent entirely on the test you just sat.	

THE MILESTONE THAT DEFINES THE WHOLE PLAN

By Sunday October 4, every gen chem and organic bank reads eighty percent or better in your portal, and you have one full length behind you. That is what content review being finished means. Everything after this date is practice and repair, not new material.

Bank numbers follow your Booster sequence. Check each one off in the portal as it clears eighty.

Practice tests

Content review teaches you the material. Practice tests teach you the exam. They are two different subjects and you have three weeks for the second one.

Five full lengths, and what each is for

TEST	WHEN	WHAT YOU ARE PRACTISING
FL 1	Sat Oct 3	The baseline now that content is closed. Sit it cold. A measurement, not a grade.
FL 2	Tue Oct 6	Pacing. Every section to time, no pausing, no exceptions.
FL 3	Sat Oct 10	Stamina. Full sitting, same start time as test day.
FL 4	Tue Oct 13	Dress rehearsal. Same clothes, same breakfast, same chair.
FL 5	Wed Oct 15	Light and confident. Sections only, whatever is still shaky.

THE RULE FOR THIS PHASE

The test is worth one day. The review is worth three. Every full length gets a review block longer than the test took, and the review is where the score actually moves.

How a practice test week runs

- **Test day.** Sit it. Nothing else that day.
- **The next day.** Every miss into the Ace Log, and name what happened: did not know it, misread it, set it up wrong, or ran out of time. The name matters more than the fix.
- **The day after.** Work the misses out loud from a blank page. Then back into the bank for whichever topic produced the most of them.
- **Repeat.** The gap between tests is not filler. It is the entire point.

Your sections, ranked by what is available

SECTION	WHERE YOU ARE	WHAT WEEKS FOUR TO SIX DO ABOUT IT
Organic	Your biggest lever, and the one content review just rebuilt	Every miss drives a return to that bank. This is where the points are.
Gen chem	Gases, thermo and redox addressed in weeks two and three	Watch whether those three stay fixed under test conditions.
Biology	Degree behind you, volume is the problem	High yield only. Cell and molecular, genetics, endocrine.
Perceptual	Cube counting and hole punching are strong	Pattern folding, top front end and keyholes. Daily and short.
Quantitative	Probability and the statement questions	Those two specifically, not the whole section.
Reading	Strongest section you have	Protect it. Thirteen minutes a passage, and leave it alone otherwise.

Test day, October 12 to 17

- Book it this week. The centre fills and this is the last variable left open.
- Nothing new in the last three days. No new banks, no new methods.
- Scores post within about four weeks and usually sooner, and they go to every school on your list automatically.

WHY THE DATE DOES NOT NEED TO MOVE

Because the application is already in. A score arriving in late October lands in a file that has been verified and sitting in front of schools for a month. That is the entire reason you submit first.

Rest day stays Saturday, except the two Saturdays a full length is scheduled.

Working with Farwa

This runs in parallel and it does not wait on the DAT. Farwa handles the application side: the AADSAS itself, the school list, supplementals, and interviews.

What happens when

WEEK	WITH FARWA
One Sep 14 to 20	Intro call. She reads the personal statement you already have and reviews the whole AADSAS before it goes. Submitted by the end of the week.
Two Sep 21 to 27	Verification is running. Confirm every letter is actually in, and that transcripts were received. This is the week small missing things surface, which is why it is not the week you submit.
Three Sep 28 to Oct 4	School list locked with Farwa, built around your real numbers and the fact that you are in New Jersey. Supplementals start arriving.
Four Oct 5 to 11	Supplementals drafted and returned. This is the week to finish them, before test week.
Five Oct 12 to 18	Nothing. Test week is test week.
Six Oct 19 to 25	Score goes out. Interview preparation begins, because November and December are when the invitations come.

THE ONE THING TO PROTECT

Supplementals get written in week four, not week five. Nothing about the application happens during test week.

What you already have going for you

- Your personal statement is written. That is usually the thing that costs people a month.
- You have worked as a dental assistant, so your experience hours are real and specific rather than assembled.
- Both of your parents are dentists, which means your answer to why dentistry has thirty years of detail behind it. Interviews reward that more than anything else on a file.
- You are in a biomedical master's programme right now, which is the clearest possible evidence that the science is being addressed.

The three dates that matter

This week	AADSAS submitted. Everything else follows from this one.
This week	Test date booked inside the October 12 to 17 window.
Late October	Score reaches a file that has been complete for a month.

If a week gets away from you, pick it up the next day. No single day in here is load bearing. The two things that are: the submission this week, and the test date being booked.
